Reviews

Unquestionably, this is the greatest operate by any article writer. I could comprehended everything out of this written e ebook. Your way of life span will be transform as soon as you total reading this book.

(Andy Erdman)

PRATIQUE DE LA PERFECTION CHRETIENNE (5)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 66 pages. Original publisher: Portland, OR: U. S. Dept. of Agriculture, Forest Service, Pacific Northwest Research Station, 2009 OCLC Number: (OCoLC)469622357 Subject: Biomass energy -- Alaska -- Interior Alaska. Excerpt: . . . Assessing the Potential for Conversion to Biomass Fuels in Interior Alaska 3. Explore the effects of model input selection and model parameter uncertainty on model outputs. 4. Qualitatively assess the effects of social factors on the feasibility of fuel substitution. 5. Examine potential feedback between ecological, economic, and social factors, and assess ways in which they might in combination affect the feasibility of wood biomass fuel use in Alaska villages. Methods Ecological Feasibility For selected interior Alaskan villages, we created a simple model to estimate the area required to supply aboveground tree biomass over a rotation length that would mimic natural fire cycles while reducing fire risk in communities, optimizing aesthetic and subsistence values, and protecting ecosystem integrity. The biomass required was calculated from input variables and model parameters selected based on published data. Input variables included village size, village per capita energy needs, and optimal harvest rotation length. Parameters internal to the model included forest cover, forest volume, predicted biomass growth curves, and energy outputs by harvest volume. Model output was expressed as maximum travel distance to obtain wood fuel - in other words, the distance between a village and the perimeter of the circle circumscribing the area of sustainable yield necessary to meet the needs described by the input variables. The radius (r) of a circle of area A is defined as $A = \pi r^2$. The area (A) necessary for fuel collection around a village would be a function of the population and its energy needs, the percentage of...
