

# Liquids Under Negative Pressure

Filesize: 8.74 MB

## ***Reviews***

*It is fantastic and great. Sure, it is perform, nonetheless an amazing and interesting literature. Once you begin to read the book, it is extremely difficult to leave it before concluding.*  
(Conor Grant)

## LIQUIDS UNDER NEGATIVE PRESSURE

Book Condition: New. Publisher/Verlag: Springer Netherlands | Proceedings of the NATO Advanced Research Workshop of Liquids Under Negative Pressure Budapest, Hungary 23-25 February 2002 | Proceedings of the NATO Advanced Research Workshop, held in Budapest, Hungary, 23-25 February 2002 | It is possible to stretch a liquid and, when suitably prepared, liquids are capable of sustaining substantial levels of tension, often for significant periods of time. These negative pressure states are metastable but can last for days - long enough for substantial experimental investigation. This volume is a review of recent and current research into the behaviour of liquids under negative pressure. Part I deals with the thermodynamics of stretched liquids. Part II discusses the physical and chemical behaviour of liquids under negative pressure. Part III contains papers on the effect of negative pressure on the solidification of a liquid. Part IV is devoted to stretched helium and Part V discusses cavitation in various stretched liquids. Part VI deals with the effect of foreign substances on cavitation. | Introduction. Photograph of the participants. Participants. Part I: Stability, metastability and instability. Limits of stability for liquids under tension; R.J. Speedy. Limiting superheat of aqueous solutions at negative pressures; V.E. Vinogradov, P.A. Pavlov. Classical thermodynamics of states with negative absolute temperature or with negative absolute pressure; K. Martínás, A.R. Imre. Limiting tensions for liquids and glasses from laboratory and MD studies; Q. Zheng, et al. Investigation of the thermodynamic properties of a polarizable water model in a wide range of pressures around the temperature of maximum density; P. Jedlovsky, R. Vallauri. Part II: Physical chemistry of liquids under negative pressure. Water at positive and negative pressures; H.E. Stanley, et al. The thermophysical properties of liquids on the melting line at negative pressures; M. Faizullin, V.P. Skripov. Liquid-liquid phase equilibria in binary mixtures...
