Birkhauser. Paperback. Book Condition: New. Paperback. 400 pages. Dimensions: 8.5in. x 5.5in. x 0.9in. The simplest model of nuclear matter is a collection of point nucleons interacting through a two-body potential that accounts for scattering data and the properties of the deuteron. In order to use and to test this model we must be able, for a given two-body potential, to calculate the corresponding saturation curve of nuclear matter. The Brueckner-Bethe method is one method of making this calculation. The available evidence suggests that, at present, the Brueckner-Bethe method can be used to locate the saturation point with an uncertainty of  $-1.2$  to  $-3$  MeV in energy and about 0.1 fm in. This is not very high accuracy, but it is good enough to make a start on physically interesting calculations. In this paper I describe the Brueckner-Bethe method and illustrate it with numerical results. Some of the results are designed to test the accuracy of the method, some are comparisons with variational calculations, and a saturation curve for the full Reid potential is given. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
