Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1854 Excerpt: . . . 8z--35z18. Bringing the unknown quantities to one side, and the known to the other, 8--5z318. Example 2. --2y4--3--80. Bringing the unknown quantities to one side, and the known to the other, 2j-3y148. Example 3. --ax--1614--bx. Bringing the unknown quantities to one side, and the known to the other, ax--bx16--14. Bringing a quantity from one side of an equation to the other, with its sign changed, is the same as adding the quantity, with its sign changed, to both sides. Thus, 3a;--1611 becomes 3a;--1616 11 16; which is equivalent to 3a11 16. For 5, when equals are added to equals, the sums are equal. 11. It follows, that we may change all the signs in an equation, without destroying the equality. For this is the same as transposing all the quantities, and reading the members 1 in the opposite order. 12. III. Adding. Example 1. --4y3y--21315--14. Adding the unknown quantities together, and the known, 5y14. Example 2. --2z6s16--64. Adding the unknown quantities together, and the known, 4z--48. Then, changing all the signs 11, Example 3. --a2aax-- and r3a3i. Adding the unknown quantities together, and the known, (a2a6)a3(a6). This part of the rule requires no demonstration. 13. IV. Dividing. Example 1. --530. Dividing both sides, by 5, 30 y 5 6. Example 2. --(a--b)x--c. Dividing both sides, by a6, a--b Example 3 (c--d)ze2--cP. Dividing both sides, by c--d, sc-dcd We require the value of the unknown quantity taken only once: and, therefore, we divide both sides by its...
